
Expert-authored
written per domain and scenario
Domain-general pipeline
the same steps in every domain, by design
Scenario spec
Persona
background and hidden facts
Sessions
dated, days or weeks apart
Checkpoints
pinned user lines, each with an expected approach
pilot: team draft, 5 sessions
Rubric
pilot: team draft
always-on
moment
safety gate
overrefusal
expert reacts to replies
drafted, then approved
grader item test
known-pass reply
known-fail reply
miss
pilot: 46 of 54 checks
Trajectory
S1
S2
S3
S4
S5
LLM draft
hand-edited, frozen
Checkpoint prefixes
all earlier turns
user turn
pilot: 13 checkpoints
Models under test
M1 M2 M3
k replies per checkpoint
pilot: 3 models, k = 3
Grader (LLM)
one check per call
verdict: met, not met or N/A
gates also: cannot determine
met needs a quote from the reply
never sees points or the model
Scoring
per reply
Σ points of met checks
Σ applicable positive points
model: mean, clipped to [0, 1]
gate rule: a model that fails a gate ranks below all that pass
Reported results
scores as graded and reviewed
per-check pass rates
every disagreement and cause
Validation loop
labels blind to grader verdicts
team labels
expert labels
disagreement review
pilot: team labelers (rehearsal)
revise check wording
people (purple fill or outline)
code and LLMs
not yet run in the pilot
